Name

Class _

YEAR 11 ASSESSMENT TASK 3 2019

MATHEMATICS EXTENSION 1

General Instructions	• Reading time – 5 minutes					
	• Working time – 2 hours					
	Write using black pen					
	Calculators approved by NESA may be used					
	• A separate reference sheet is provided					
	• For questions in Section II, show relevant mathematical reasoning and/or calculations					
Total marks 95	Section I 5 months					
i otal marks: 05	Section 1 – 5 marks					
	• Attempt Questions 1–5					
	• Allow about 7 minutes for this section					
	Section II – 80 marks					
	Attempt Questions 6-9					
	• Allow about 1 hours and 53 minutes for this section					

The answers to all questions are to be returned in separate *stapled* bundles, clearly marked with Question 6, Question 7, etc., with your student number. Question 1

Which set provides a solution to the inequality $|3x - 2| \ge |x + 4|$?

A. $\{x: -\frac{1}{2} \le x \le 3\}$ B. $\{x: x \le -\frac{1}{2} \text{ or } x \ge 3\}$ C. $\{x: x \le -\frac{1}{2}\}$ D. $\{x: x \le 3\}$

Question 2

Let $P(x) = x^3 + 3x^2 + ax + b$, where a and b are integers. When P(x) is divided by (x + 1), the remainder is 4. When P(x) is divided by (x - 1), the remainder is -2.

What is the remainder when P(x) is divided by $(x^2 - 1)$?

A. 4x + 2B. -4x - 2C. 3x - 1D. -3x + 1

Question 3

The cubic equation $x^3 + px^2 + qx + r = 0$, where p, q and r are integers, has roots α, β and γ , such that $\alpha + \beta + \gamma = 15$ and $\alpha^2 + \beta^2 + \gamma^2 = 83$. What is the value of p + q?

A. 56 B. -56 C. -86 D. 86

Question 4

A team of six students is to be formed from a class of ten students. How many different teams can be formed if two particular students cannot both be selected for the team?

A. 252 B. 210 C. 168 D. 140

Question 5

What does the expression $\frac{\cos 3x - \cos 5x}{\sin 3x + \sin 5x}$ simplify to?

A. $\cot x$ B. $-\tan x$ C. $\tan x$ D. $-\cot x$ **Question 6 (20 Marks)**

START A NEW PAGE

Marks

(a) Find the exact value of:
$$\sin\left(\sin^{-1}\frac{1}{2} + \cos^{-1}\frac{5}{13}\right)$$
 2

(b) If
$$\frac{\sin\theta}{1+\cos\theta} + \frac{\sin\theta}{1-\cos\theta} = 4$$
, find the exact value of $\cot 2\theta$ for $0 \le \theta \le \frac{\pi}{2}$.

(c) Show that
$$\cos 37\frac{1}{2}^{\circ} \sin 7\frac{1}{2}^{\circ} = \frac{\sqrt{2}-1}{4}$$
, without using a calculator. 2

(d) Sketch the graph of
$$y = \frac{1}{2}\cos^{-1} 2x$$
. 2

(e) Consider the function
$$f(x) = \frac{x-1}{x-2}$$

(i) Show that
$$f^{-1}(x) = \frac{2x-1}{x-1}$$
 1

- Sketch f and f^{-1} on the same system of axes, showing (ii) 3 any asymptotes and intercepts. Clearly label your graphs.
- The speed, $V m s^{-1}$, of a parachute, t seconds after jumping from an aeroplane is (f) modelled by the equation

$$V = 42\left(1 - \frac{1}{e^{\frac{t}{\pi}}}\right).$$

- Find the acceleration of the parachutist after π seconds, to two decimal places. (i) 2
- The parachute opens when it reaches a speed of $21 m s^{-1}$. 2 (ii) Find the exact time of falling before the parachute opens?
- Show that among the 900 students at James Ruse, at least 3 students share a birthday. 2 (g)

Question 7 (20 Marks)

START A NEW PAGE

(a) For what values of x is the inequality
$$\frac{x}{x+1} \ge \frac{2}{x+3}$$
 satisfied? 4

(b) Find the values of a and b if
$$2x^3 - (2a+1)x^2 + (2+b)x - 1 = 0$$

has a multiple root at $x = 1$.

(c) The parametric equations of a curve are $x = \ln(1 + t^2)$ and $y + 1 = \ln(1 + 2t^2)$. 4 Find the cartesian equation of the curve, and hence show that the *x*-intercept of the curve is $\ln\left(\frac{1+e}{2}\right)$.

(d) The graph of y = f(x) is shown. $y = f(x) \xrightarrow{x} y$ $y = f(x) \xrightarrow{x} y$ Not to scale
On separate systems of axes, draw the graph of
(i) y = f(|x|)(ii) $y = \sqrt{(f(x))^2}$ 2
(e) From seven girls and five boys, a committee of seven is to be chosen. What is the probability of choosing a committee containing at least four girls?

(f) How many people would have to be in a school before it contained at least two people **3** with the same first and last initials.

Marks

Question 8 (20 Marks)

(a) Solve for *x* and *y*:

$$2\tan^{-1} x - \cos^{-1} y = \frac{\pi}{2}$$
$$3\cos^{-1} y + \tan^{-1} x = \frac{5\pi}{6}$$

(b) Solve
$$\cos x - \cos 3x = 0$$
 for $-\frac{\pi}{2} \le x \le \frac{\pi}{2}$

(c) The graph of y = f(x) is drawn below.

(i)
$$y^2 = f(x)$$
 3

(ii)
$$y = \frac{1}{f(x)}$$
 3

(d) At a particular dinner, each rectangular table has nine seats, five facing the stage and four with their backs to the stage.

- (i) In how many ways can 9 people be seated at the table if John and Mary 2 sit on the same side?
- (ii) What is the probability of John and Mary sitting on opposite sides of the table? **3**
- (e) 10 points are placed randomly in a 1 by 1 square. Show that there must be some pair of **3** points that are within $\frac{\sqrt{2}}{3}$ of each other.

3

TERM 3, 2019

START A NEW PAGE

Marks

(a) (i) If
$$t = \tan \theta$$
, show that $\tan 4\theta = \frac{4t(1-t^2)}{1-6t^2+t^4}$ 3

(ii) Given the roots of
$$\tan 4\theta = \cot \theta$$
 are $\theta = \frac{\pi}{10}$ and $\theta = \frac{3\pi}{10}$.
Find the exact value of $\tan \frac{\pi}{10}$.

(b) If
$$\alpha$$
, β and γ are the roots of $3x^3 + 8x^2 - 1 = 0$, find the value of
 $\left(\beta + \frac{1}{\gamma}\right)\left(\gamma + \frac{1}{\alpha}\right)\left(\alpha + \frac{1}{\beta}\right)$.

(c) A metal rod is taken from a freezer at $-8^{\circ}C$ into a room where the air temperature is $22^{\circ}C$. The rate at which the rod warms follows Newton's law, that is $\frac{dT}{dt} = -k(T - 22)$ where k is a positive integer, time t is measured in minutes and temperature T in ${}^{\circ}C$.

(i)	Show that the function $T = 22 - Ae^{-kt}$, where A is a constant, provides this rate of change.	1
(ii)	Hence find the value of A	2
(iii)	The temperature of the rod reaches $4^{0}C$ in 90 minutes. Find the exact value of k.	2
(iv)	Find the temperature of the rod after another 90 minutes.	1

(d) Suppose a particular population of bacteria obeys the growth formula $P(t) = \frac{6000}{3 + 7 e^{-0.2 t}}$ where *P* is measured in milligrams and time *t*, in hours.

(i)Predict what the population will be as t gets very large.1(ii)If the population grows the fastest when
$$P(t) = 1000$$
, find when this occurs, to 4 significant figures.2

(c) Sketch the graph of P(t), showing all important features. 2
