

SYDNEY TECHNICAL HIGH SCHOOL

**MATHEMATICS EXTENSION 2**

HSC ASSESSMENT TASK 1

MARCH 2009

General Instructions

- Working time allowed – 70 minutes
- Write using black or blue pen
- Approved calculators may be used
- All necessary working should be shown
- Start each question on a new page
- Attempt all questions
- All questions are of equal value
- 

NAME: \_\_\_\_\_

Question 1	Question 2	Question 3	Total

## QUESTION 1

Mark

- a) Let  $\alpha = 5 - 3i$  and  $\beta = 2 + i$
- (i) Find  $\alpha + \beta$  1
- (ii) Find  $\frac{\alpha}{\beta}$  in the form  $x + iy$  1
- (iii) If  $z = x + iy$ , sketch the region defined by  $\text{Im}(z\alpha) < 3$  2
- b) The complex number  $z = 1 + 2i$  is a root of the equation  $z^2 - aiz + b = 0$  where  $a$  and  $b$  are real numbers.
- (i) Find the values of  $a$  and  $b$  2
- (ii) Find the other root of the equation 1
- c) Sketch the region defined by 3
- $$1 < |z - (1 + i\sqrt{3})| < 2 \text{ and } 0 \leq \arg z \leq \frac{\pi}{3}$$
- d) Let  $z = \frac{1}{\sqrt{2}} + \frac{i}{\sqrt{2}}$
- (i) Express  $z$  in modulus – argument form 1
- (ii) Hence or otherwise show that  $z$  is a root of the equation  $z^4 = -1$  1
- (iii) Find the other roots of  $z^4 = -1$  2
- (iv) Find the side length of the square formed by plotting the solutions to part (iii) on an Argand diagram and joining them together. 1

## Question 2

- a) Find the gradient of the tangent to the curve  $x^3 + y^3 - 3xy = 3$  at the point (1,2) 2

b)

MARK

The point  $P(x_0, y_0)$  lies on the hyperbola

$$\frac{x^2}{16} - \frac{y^2}{9} = 1$$

The tangent to the hyperbola at  $P$  cuts the  $x$  axis at  $T$  and has equation

$$\frac{x_0 x}{16} - \frac{y_0 y}{9} = 1$$

The two foci of the hyperbola are  $S$  and  $S'$ , and the two directrices are  $d$  and  $d'$ . The points  $M$  and  $M'$  are the closest points to  $P$  on the directrices  $d$  and  $d'$ .

- |       |  |   |
|-------|--|---|
| (i)   | Find the co ordinates of the foci                              | 2 |
| (ii)  | Find the equations of the directrices                          | 1 |
| (iii) | Show that $T$ has co ordinates $(\frac{16}{x_0}, 0)$           | 1 |
| (iv)  | Using the focus- directrix definition, or otherwise, show that | 3 |

$$\frac{PS}{PS'} = \frac{TS}{TS'}$$

- |     |  |   |
|-----|--|---|
| (c) | Find the equation of the ellipse with eccentricity $\frac{3}{4}$ and directrices at $x = \pm 16$ | 2 |
| (d) | (i) Express $z = \frac{1+\sqrt{3}i}{1+i}$ in the form $rcis \theta$ .                            | 3 |
|     | (ii) Find the smallest positive integer $n$ such that $z^n$ is a real number                     | 1 |

**QUESTION 3**

**MARK**

- (a) If the line  $kx + my + n = 0$  is a tangent to the hyperbola  $xy = c^2$ , prove that  $n^2 = 4c^2 km$ . 2

The point  $P\left(cp, \frac{c}{p}\right)$  where  $p \neq \pm 1$ , is a point on the hyperbola  $xy = c^2$ , and the normal to the hyperbola at  $P$  intersects the 2<sup>nd</sup> branch at  $Q$ . The line through  $P$  and the origin  $O$  intersects the second branch at  $R$ .

- (i) Show that the equation of the normal is  $py - c = p^3(x - cp)$  2
- (ii) Show that the  $y$  coordinates of  $P$  and  $Q$  satisfy the equation. 3
- $$py^2 - c(1 - p^4)y - p^3c^2 = 0$$
- (iii) Find the coordinates of  $Q$ . 1
- (iv) Show that  $Q, R$  and  $P$  are concyclic 2
- (e) (i) If  $w$  is a complex cube root of unity (ie: a root of  $z^3 = 1$ ), prove that  $w^2$  is also a root. 1
- (ii) Prove that  $1 + w + w^2 = 0$  1
- (iii) Hence or otherwise form a quadratic equation whose roots are given by  $\alpha = 2 + w$  and  $\beta = 2 + w^2$  3

HSC Assessment Task 1 - Ext. 2  
 March 2009 - Solutions

Question 1

a)  $\alpha = 5 - 3i$      $\beta = 2 + i$

ci)  $\alpha + \beta$   
 $5 - 3i + 2 + i$   
 $= 7 - 2i$

cii)  $\frac{\alpha}{\beta}$   
 $\frac{5 - 3i}{2 + i} \times \frac{2 - i}{2 - i}$   
 $= \frac{10 - 11i - 3}{5}$   
 $= \frac{7}{5} - \frac{4}{5}i$

ciii)  $\text{Im}[(x + iy)(5 - 3i)] < 3$   
 $\text{Im}[5x - 3xi + 5y - 3xyi] < 3$   
 $-3x + 5y < 3$

b) ci)  $z = 1 + 2i$  is a root of  
 $z^2 - aiz + b = 0$   
 $\therefore (1 + 2i)^2 - ai(1 + 2i) + b = 0$   
 $-1 + 4i - ai + 2a + b = 0$   
 $(2a + b - 1) + i(4 - a) = 0$   
 Equating real and imaginary parts to 0  
 $\Rightarrow a = 4$      $b = -7$

cii)  $z^2 - 4aiz - 7 = 0$   
 Let the other root be  $z = x + iy$   
 Sum of roots  
 $z + 1 + 2i = 4ai$   
 $(x + iy) + 1 + 2i - 16i = 0$   
 $(x + 1) + i(y - 14) = 0$   
 $\therefore x = -1, y = 14$   
 $\therefore$  Other root is  $-1 + 14i$

d) ci)  $|z| = \sqrt{\left(\frac{1}{\sqrt{2}}\right)^2 + \left(\frac{1}{\sqrt{2}}\right)^2}$   
 $= \sqrt{\frac{1}{2} + \frac{1}{2}}$   
 $|z| = 1$   
 $\arg z = \tan^{-1} 1 = \frac{\pi}{4}$

Teacher's Name:

Student's Name/N<sup>o</sup>:

(ii)  $Z = \text{cis } \frac{\pi}{4}$

$Z^4 = (\text{cis } \frac{\pi}{4})^4$

$Z^4 = \text{cis } \pi$  by De Moivre's Theorem  
 $= -1$  as req'd  $\therefore$  a root

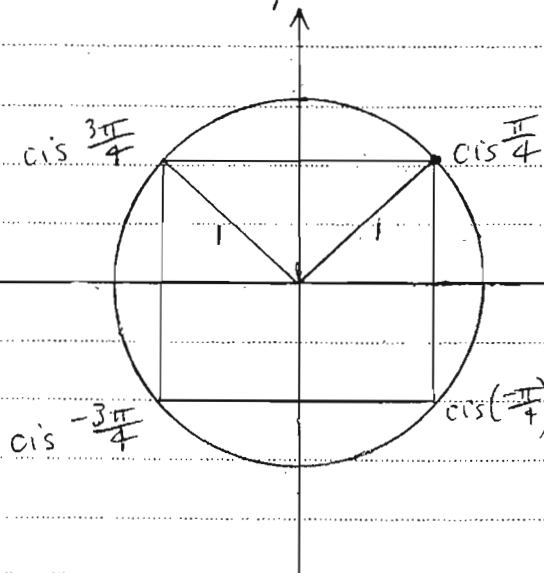

(iii)  $Z^4 = -1$

$Z^4 = \text{cis}(\pi + 2k\pi)$

$Z = \text{cis}(\frac{\pi + 2k\pi}{4})$  by De Moivre's

$\therefore Z = \text{cis } \frac{\pi}{4}, \text{cis } \frac{-\pi}{4},$   
 $\text{cis } \frac{3\pi}{4}, \text{cis } \frac{-3\pi}{4}$

(iv)

By Pythagoras  
 $\sqrt{1^2 + 1^2}$

$\sqrt{2}$  is side length

### Question 2

a)  $x^3 + y^3 - 3xy = 3$

Differentiating implicitly

$3x^2 + 3y^2 \frac{dy}{dx} - 3x \frac{dy}{dx} - 3y = 0$

$\frac{dy}{dx}(3y^2 - 3x) = 3y - 3x^2$

$\frac{dy}{dx} = \frac{y - x^2}{y^2 - x}$

$\therefore$  At  $(1, 2),$

$m_{\text{tangent}} = \frac{1}{3}$

b) (i) Foci at  $(\pm ae, 0)$

$a = 4$

$b^2 = a^2(e^2 - 1)$

$9 = 16(e^2 - 1)$

$\frac{9}{16} = e^2 - 1$

$e^2 = \frac{25}{16}$

$e = \frac{5}{4}$

$\therefore (\pm ae, 0) \Rightarrow (\pm 5, 0)$

(ii) Directrices  $x = \pm \frac{a}{e}$

$x = \pm \frac{4}{5/4}$

$x = \pm \frac{16}{5}$

Teacher's Name:

Student's Name/N<sup>o</sup>:

ciii) T on tangent is where  $y = 0$

$$\text{ie: } \frac{x_0 - x}{16} - 0 = 1$$

$$x = \frac{16}{x_0}$$

$\therefore T$  is  $(\frac{16}{x_0}, 0)$

civ) Need to show

$$\frac{PS}{PS'} = \frac{TS}{TS'}$$

Since  $PS = e PM$  and  $PS' = e PM'$

$$\therefore \frac{PM}{PM'} = \frac{TS}{TS'}$$

$$\frac{x_0 - \frac{16}{5}}{x_0 + \frac{16}{5}} = \frac{5 - \frac{16}{x_0}}{\frac{16}{x_0} + 5}$$

$$\frac{5x_0 - 16}{5x_0 + 16} = \frac{5x_0 - 16}{5x_0 + 16} \checkmark$$

$\therefore$  Result shown

d)  $16 = \frac{a}{e}$

$e = \frac{3}{4}$

$\therefore a = 12$

$b^2 = a^2(1 - e^2)$

$b^2 = 144(1 - (\frac{3}{4})^2)$

$b^2 = 144 \times \frac{7}{16}$

$b^2 = 63$

$\therefore$  Ellipse has eq'n

$\frac{x^2}{144} + \frac{y^2}{63} = 1$

dci)  $z = \frac{1 + \sqrt{3}i}{1 + i}$

$1 + i$

$1 + \sqrt{3}i = 2 \text{cis} \frac{\pi}{3}$

$1 + i = \sqrt{2} \text{cis} \frac{\pi}{4}$

$\therefore z = \sqrt{2} \text{cis} \frac{\pi}{12}$

cii)  $z^n = (\sqrt{2})^n \text{cis} (\frac{\pi}{12})$

$= (\sqrt{2})^n \text{cis} (\frac{\pi n}{12})$

is real if

$\sin(\frac{\pi n}{12}) = 0$

ie: when  $n = 12, n > 0$

Question 3

a) Solve simultaneously

$kx + my + n = 0$

$xy = c^2$

$y = \frac{c^2}{x}$

$\Rightarrow kx + m \times \frac{c^2}{x} + n = 0$

$kx^2 + nx + mc^2 = 0$

$\rightarrow$  If line is a tangent, only one solution  $\Rightarrow \Delta = 0$   
 $n^2 - 4 \times k \times mc^2 = 0$   
 $n^2 = 4kmc^2$  as required

Teacher's Name:

Student's Name/N<sup>o</sup>:

b) (i)  $x = cp$        $\frac{dx}{dp} = c$   
 $y = \frac{c}{p}$        $\frac{dy}{dp} = -\frac{c}{p^2}$

$$\therefore \frac{dy}{dx} = \frac{\frac{dy}{dp}}{\frac{dx}{dp}} = \frac{-\frac{c}{p^2}}{c} = -\frac{1}{p^2}$$

$$\frac{dy}{dx} = -\frac{1}{p^2}$$

$y - y_1 = m(x - x_1)$   
 $y - \frac{c}{p} = -\frac{1}{p^2}(x - cp)$   
 is the eq'n of the normal  
 $py - c = p^3(x - cp)$   
as required

(ii) Solving the hyperbola simultaneously with the normal:

$$\begin{cases} xy = c^2 \\ py - c = p^3(x - cp) \end{cases}$$

$$py - c = p^3\left(\frac{c^2}{y} - cp\right)$$

$$py^2 - cy = p^3(c^2 - cpy)$$

$$py^2 - cy = p^3c^2 - cp^4y$$

$$py^2 - c(1 - p^4)y - p^3c^2 = 0$$

(iii) One root of (ii) is  $\frac{c}{p}$ . Let  $y$  value of  $y$  be  $\alpha$ . Product of roots is  $-\frac{pc^2}{p}$   
 $\alpha \times \frac{c}{p} = -\frac{pc^2}{p}$

$$\therefore \alpha = -cp^3$$

$$\therefore x \text{ value of } Q \text{ is } \frac{c^2}{\alpha}$$

$$= \frac{c^2}{-cp^3} = -\frac{c}{p}$$

$$\therefore Q \left( -\frac{c}{p^3}, -c \right)$$

(iii) cont'd.

QRP are concyclic if  $\angle QRP = 90^\circ$  (Angle in a semi-circle is  $90^\circ$ )  
 ie:  $M_{QR} \times M_{RP} = -1$

Since  $xy = c^2$  is odd R is  $(-cp, \frac{c}{p})$

$$M_{QR} = \frac{-\frac{c}{p^3} + \frac{c}{p}}{\frac{c}{p} + cp}$$

$$M_{RP} = \frac{\frac{c}{p} + \frac{c}{p}}{cp + cp}$$

$$= \frac{\frac{c}{p} - \frac{c}{p^3}}{p - \frac{c}{p^3}} = \frac{\frac{c}{p}}{p} = \frac{1}{p^2}$$

(iii) cont'd

$$M_{QR} \times M_{RP}$$

$$= \frac{\frac{1}{p} - p^3}{p - \frac{1}{p^3}} \times \frac{1}{p^2}$$

$$= \frac{\frac{1}{p} - p^3}{p^3 - \frac{1}{p}}$$

$$= -1 \quad \therefore \text{QRP are concyclic}$$

e. (ii) If  $\omega$  is a root of  $z^3 = 1$ , then  $\omega^3 = 1$ . If  $\omega^2$  is also a root then

$$\begin{aligned} (\omega^2)^3 &= 1 \\ \Rightarrow (\omega^3)^2 &= 1 \\ 1^2 &= 1 \quad \checkmark \quad \therefore \omega^2 \text{ is a root.} \end{aligned}$$

(ii) The 3 roots of  $z^3 = 1$  are  $1, \omega$  and  $\omega^2$ .

$$\begin{aligned} \text{Sum of roots} &= 1 + \omega + \omega^2 \\ &= -\frac{b}{a} \text{ from polynomial theory} \end{aligned}$$

$$\begin{aligned} z^3 - 1 &= 0 \\ -\frac{b}{a} &= 0 \end{aligned}$$

$$\therefore 1 + \omega + \omega^2 = 0 \text{ as required.}$$

(iii) Roots of quadratic are  $\alpha$  and  $\beta$  3

$$z^2 - (\alpha + \beta)z + \alpha\beta = 0$$

$$z^2 - (2 + \omega + 2 + \omega^2)z + (2 + \omega)(2 + \omega^2) = 0$$

$$z^2 - (1 + \omega + \omega^2 + 3)z + (4 + 2\omega^2 + 2\omega + \omega^3) = 0$$

$$z^2 - 3z + [5 + 2(\omega + \omega^2)] = 0 \quad \text{since } \omega^3 = 1 \text{ and using (ii)}$$

Teacher's Name:

Student's Name/N°:

$$z^2 - 3z + (5 + 2(-1)) = 0$$

$$z^2 - 3z + 3 = 0$$
